

Regional evolution in standardised beneficiary rates

Metropolitan analysis groupings; France, 2022–2025

Sources: Open Medic, the French National Institute of Statistics and Economic Studies, and Etalab administrative contours derived from IGN ADMIN EXPRESS. All panels use the same colour scale. The series begins in 2022 because 2020–2021 include disclosure–control intervals rather than complete point estimates. Open Medic group 93 combines Provence–Alpes–Côte d’Azur and Corse. The overseas aggregate is not assigned to individual DROM.
