

Age-sex-standardised reimbursed glucagon-like peptide-1 receptor agonist use

Regional rates per 100,000 residents; France, 2025

Sources: Open Medic, the French National Institute of Statistics and Economic Studies, and Etalab administrative contours derived from IGN ADMIN EXPRESS. Rates are age-sex-standardised to the 2025 France-wide population. Open Medic group 93 combines Provence-Alpes- Côte d'Azur and Corse; both geometries share that estimate. Overseas territories are available only as the combined BEN_REG 5 grouping (2,435.9 beneficiaries per 100,000 in 2025) and are not mapped. Analyses are descriptive.
